Guidelines for Assigning Animals into USDA Pain and Distress Categories

The intent of this policy is to assist Principal Investigators in protocol preparation by describing the guidelines for assigning research or teaching animals into USDA pain and distress categories on protocols. This policy is intended for use by all personnel involved in writing or reviewing research or teaching protocols.

   I. Appendix 1: Definition and Examples of USDA Pain and Distress Categories
   II. Appendix 2: Clinical Signs of Pain or Distress

1. Policy:
All vertebrate animals used for research or teaching must be assigned to a USDA pain and distress category on the protocol under which they are used. Procedures that could cause pain or distress in humans should be assumed to cause pain or distress in other animals. This document provides definitions and examples of the USDA pain and distress levels to ensure that animals are listed on their protocol under the correct USDA pain and distress category.

2. Procedures:
   • Assign each animal listed on a protocol to one of the following USDA pain and distress categories: B, C, D or E. For definition and examples of USDA pain and distress categories, see Appendix 1.
   • List each animal under the highest pain and distress category that will apply to the animal at any time while the animal is listed on the protocol, even if it is for a short duration of time.
   • Do not include non-research related veterinary care in determining USDA pain and distress category.
   • See Appendix 2 for examples of clinical signs of pain or distress.
   • If a procedure is done on an animal (e.g. tail snip or euthanasia), list the animals as category C or greater. This includes animals used for breeding if they are later euthanized. Thus, breeding mice should be placed in category C rather than category B. List breeding animals as category B only if no procedures are done, including euthanasia.
Genetically engineered animals

- Place animals in category C if the phenotype produced by the genetic alteration is unknown. Amend the category once the investigator or veterinary staff recognizes phenotype-related pain or distress.
- Place animals in category D if the phenotype is expected to cause, pain or distress that will be alleviated by IACUC approved methods.
- Place animals in category E if the phenotype is expected to cause, pain or distress that will not be alleviated.
- Describe any new information regarding the phenotype, including adverse events, and adjust the pain and distress category as necessary during the annual review.

<tr>
<td></td>
<td>5. Nibbling, licking, scratching, rubbing</td>
</tr>
<tr>
<td></td>
<td>6. Eyes are semi-closed</td>
</tr>
<tr>
<td></td>
<td>7. Head shaking (ear pain)</td>
</tr>
<tr>
<td></td>
<td>8. Reduced appetite and subsequent weight loss</td>
</tr>
<tr>
<td>Swine</td>
<td>1. Tolerate manipulations</td>
</tr>
<tr>
<td></td>
<td>2. Lying down more frequently, immobile</td>
</tr>
<tr>
<td></td>
<td>3. Aggressive vocalization and behavior</td>
</tr>
<tr>
<td></td>
<td>4. Altered gait</td>
</tr>
<tr>
<td></td>
<td>5. Increased muscle tension around the eye</td>
</tr>
<tr>
<td></td>
<td>6. Pilo-erection</td>
</tr>
<tr>
<td></td>
<td>7. Reduced appetite (sometimes)</td>
</tr>
<tr>
<td></td>
<td>8. Reluctance to move</td>
</tr>
</tbody>
</table>
Ruminants

1. Vocalization
2. The animal is isolated from the social group
3. Lying down more frequently, immobile
4. Apathy, depression
5. Altered gait, lameness
6. Increased respiratory rate (abdominal pain) or shallow respiration
7. Cessation of rumination; teeth grinding, dorsal lip-curling (goats)
8. Loss of appetite (partially or totally)
9. Tucked abdomen

Birds

1. Inappetence
2. Wasting
3. Ruffled feathers
4. Altered gait or posture
5. Rapid open mouth breathing (panting)
6. Dull eyes

Horses

1. Reluctance to handling (acute pain)
2. Restlessness
3. Anxious appearance with dilated pupils
4. Ears drawn back, flat to head
5. Rigid stance
6. Profuse sweating
7. Kicking at abdomen (abdominal pain)
8. Flehman-like lip posturing
