

TPS Launches Parking Improvement Plan

After a comprehensive review of past customer surveys campus feedback, and other research, TPS has developed a five-year, multi-phase plan to improve parking across campus.

The first phase of this plan called for the creation of more than 300 new parking spaces and the repair of over 1,000 parking spaces in the largest commuter lots east of campus. These projects totaling \$1.5 million are scheduled to be completed in time for classes to begin Aug. 19. A majority of these spaces are designated for multi-permit use.

In order to fund these and future improvements, it is necessary to increase permit prices to \$195. One hundred percent of the increase will be dedicated to expanding the number of parking spaces over the next five years. One possible method of expansion could potentially involve the future construction of a multi-tier parking structure. More communication will follow as this conversation develops.

Transportation and Parking Services is dedicated to providing the UCO community a safe environment and access to campus facilities by managing all available transportation and parking resources in support of the university's mission.
