Caribbean Land Crab Research of Dr. David Bass and Students Highlighted

Dr. David Bass and Biology graduate student Kinsey Tedford are spending a second summer studying land crabs on Grand Cayman in the western Caribbean. Dr. Bass and his students continue to conduct extensive, long-term ecological studies into the biology, behavioral ecology, and conservation of insular Caribbean invertebrates, including land crabs, as invited members of the Cayman Department of the Environment. These research efforts were recently highlighted in an interview by the local television station.
